

Agenda

- 1) OS module
 - 2) WCAT
- this module provides func that you can use retrieve information from the underlying OS, and interact with it.

WCAT → Linux/Unix

node wcat.js [options] [filepath]

- 1) node wcat.js -s -n -b filepath → display contents of a file
- 2) node wcat.js -s -n -b filepath1 filepath2 → display content of all files
- 3) node wcat.js -s filepath → file content at space → X
big line breaks → singular

4) -n → $\begin{matrix} 1 \\ 2 \\ 3 \end{matrix}$ → numbering to all lines

5) -b → $\begin{matrix} 1 \\ 2 \end{matrix}$ → numbering to non empty lines

-n → flag +1

-b →

→ space
str = Hello - my-name - is - Abhishek
str.split(" ")

→ ["Hello -", "-my-name-", "-is -", "Abhishek"]

options

1) -s

2) -n

3) -b

Terminal

1. Hello How
2. are you
3. I am fine
